

CULTURALLY RELEVANT EDUCATIONAL CONTENT FOR CANADIAN SCHOOLS

Learning Bird is committed to supporting reconciliation and decolonizing educational content. We work in collaboration with First Nations from coast-to-coast to help preserve language and culture, and integrate Indigenous perspectives into classroom resources for grades 6-12.

Through our partnerships, we've created digital lessons that showcase Indigenous themes, examples, voices, and perspectives. Many non-Indigenous school boards have a desire to add digital resources to their classrooms, especially those that help support and convey Indigenous peoples. However, they often lack the resources, and teacher support to achieve this. Learning Bird makes it easy for teachers to enhance instruction with engaging digital lessons using the tools they have today in the classroom. Teachers can integrate videos, podcasts, handouts, and slideshows into their teaching to reflect different perspectives, including Indigenous ones, and help students better relate and engage.

WORKING WITH LEARNING BIRD

Our team of teachers works alongside your school to help identify needs, and create outlines and scripts that meet your educational and curriculum goals. Content is produced in our in-house studio and made available on our platform for easy access by teachers.

CULTURALLY RELEVANT, CURRICULUM-ALIGNED CONTENT

Students learn best when the content they are engaging with is relevant and they can see themselves reflected in it. This is why we offer content that is inclusive and built in collaboration with our partner communities. Our content supports math, science, English, social studies, as well as language and culture.

COLLABORATIVE CONTENT CREATION PROCESS

Ensuring content is culturally relevant means developing lessons in a collaborative way, with full participation and consultation between schools and communities. This is why we have an established collaborative process to prioritize content needs, develop plans for resource collection and creation, and gather content approvals as lessons are created. Content creation must be a team effort that involves teachers, Elders, Knowledge Keepers and language/culture experts.

CLASSROOM-READY PLATFORM

Our award-winning platform enables teachers to quickly find relevant content to use with their students. Teachers can create playlists of their favourite lessons, mark items for future use, or even assign specific lessons out to individual students.

SUPPORT FOR SCHOOLS WITH CONNECTIVITY ISSUES

Many schools with a limited Internet connection find it challenging to access and integrate digital resources into their classrooms. Learning Bird offers a Nest Server option, which places a local server in the school, so bandwidth is no longer a limitation.

TEACHER TRAINING AND PROFESSIONAL DEVELOPMENT

A key element of any successful technology implementation is ensuring that teachers have thorough training and unlimited support. We offer in-person training workshops where we not only look at how to use the platform, but also how to integrate content into instruction. We then follow-up with a second visit to do one-on-one coaching with teachers and can offer specialized professional development sessions on a variety of topics.

WHAT MAKES LEARNING BIRD UNIQUE?

- ✓ Custom programs to fit the needs of every school, board or district
- ✓ Onsite teacher training
- ✓ An established, consultative approach to content creation
- ✓ Ongoing teacher support via phone, email, and live chat
- ✓ Offline access for schools with limited Internet connections
